LISTING OF THE CLAIMS:

This listing of the claims will replace all prior versions, and listings, of the claims in the application.

Claims 1-3 (Canceled)

Sub2

1   4. (currently amended) A computer program product forming an extension of a
2   scripting language platform that extends a set of widgets used in a graphical script language platform
3   interface to include web browser plug-in applications designed to extend the functionality of web
4   browser programs, where an extension command is added to the scripting language and with an
5   extension command syntax including a source locator parameter, with the computer program product
6   comprising:
7   a computer-readable storage medium for storing plug-in-interface extension
8   program code for extending the functionality of a script interpreter platform by employing web-
9   browser plug-in applications as widget components within the graphical script language platform
10   interface, said plug-in-interface extension program code comprising:
11   parsing program code for causing a computer to parse a script to
12   identify an extension command and the source locator parameter, which can reference any
13   browser plug-in application included in the installed base of browser plug-in applications,
14   included in the syntax of the extension command;
15   fetching program code for, when the extension command is parsed,
16   fetching objects referenced by the source locator parameter using standard internet
17   procedures;
18   program code, providing the same functions and interfaces to a web
19   browser plug in as is provided by a web browser API, for causing the computer to
20   automatically invoke the browser plug-in application and to allow the web browser plug-in
21   application to display and provide interactive processing of a data and/or program object,
22   referenced by the source locator parameter, within a plug-in-interface extension-controlled
23   window of the graphical script language platform interface so that the set of script language

24   platform widgets is extended to include the entire installed base of browser plug-in

25   applications; and

26   program code for causing the computer to allow manipulation, under control of a

27   script, of the browser plug-in application so that the web browser-plug in application can be

28   manipulated as a widget native to the scripting language platform.

Claims 5-8 (Canceled)
